JOURNAL OF APPLIED ELECTROCHEMISTRY 15 (1985) 973–978

Indexes to Volume 15 (1985)

The subject index has been organized into topics for easy reference.

Subject index

Corrosion and protection

a. c. impedance study of steel in concrete. An, 755
Adsorption and corrosion inhibition properties of thymol, 767
Analysis of the principal component of external casing corrosion in deep wells, 325
Effect of gallium and phosphorus on the corrosion behaviour of aluminium in sodium chloride solution. The, 415

Effluent treatment and emission control

Adsorption on packed bed electrodes, 745
Anodic oxidation of aniline for waste water treatment, 285
Concentration of carbon dioxide by a high-temperature electrochemical membrane cell, 431
Electrosorption of phenol onto activated carbon. The, 53
Fundamental studies on a new concept of fuel gas desulphurization, 639

Electrochemical analysis, sensors and instruments

Preparation and reproducibility of a thermal silver–silver chloride electrode, 727
Response behaviour of oxygen sensing solid electrolytes, 139

Electrochemical engineering, cell design and performance (see also Electrolytic gas evolution)

Enhanced mass transfer at the rotating cylinder electrode: III. Pilot and production plant experience, 807
Investigation of sulphite ion oxidation as an alternative anodic reaction in fluidized bed electrowinning or other high rate electrolysis cells. An, 609
Modelling of a continuous parallel plate plug flow electrochemical reactor: electrowinning of copper, 925
Performance criteria and nomenclature in electrochemical engineering, 175
Reactor engineering models of complex electrochemical reaction schemes. III. Galvanostatic operation of parallel reactions in batch reactors, 837
Reactor engineering models of complex electrochemical reaction schemes. IV. Galvanostatic operation of series reactions with solvent decomposition, 859
Recycle reactor models for complex electrochemical/chemical reaction systems, 659

Electrochemical machining

Studies of the discharge mechanisms in electrochemical arc machining, 113

Electrochemical mass transfer (see also Electrolytic gas evolution)

Electrochemical mass transfer studies in open cavities, 405
Film model for determining the effect of ionic migration in electrochemical systems. The, 237
Mass transfer at the electrodes of the 'falling-film cell', 181
Model for correlating mass transfer data in parallel plate gas sparged electrochemical reactors. A, 777

Electrochemical methods

Impédances de cellules de conductivité. I. Détermination des plages de fréquence de mesure de la conductivité, 913
Méthode simple de résolution des équations intégrals décrivant les courbes de la voltampérométrie cyclique ou triangulaire, 307
Use of bromide and thiocyanate ion-sensitive electrodes in the presence of quaternary ammonium ions, 969

Electrode kinetics, catalysis

Effect of mesh size on the performance of Teflon bonded oxygen-evolving electrodes, 961
Effect of method of preparation of FePc oxygen reduction catalyst on the activity of practical air electrodes, 77
Electrochemical behaviour of copper in alkaline solutions containing sodium sulphide. The, 685
Electrochemical behaviour of pure ion in concentrated sodium hydroxide solutions at different temperatures: a triangular potential sweep voltammetric study, 675
Electrochemical reduction of anthraquinone to anthrone in concentrated H_2SO_4. The, 771
Influence of catalyst-supporting methods on electrochemical activity and the resultant stability of air electrodes activated with iron phthalocyanine. The, 441
Mechanistic study of Cl_2 evolution at Ti-supported Co_3O_4 anodes, 335
Oxygen depolarized electrolysis of sodium chloride by the use of a β-aluminia–molten salt system, 225
Oxygen evolution on $NiCo_2O_4$ electrodes, 29

Electrolytic gas evolution, bubble behaviour

Application of the methods of electrode kinetics, especially the impedance, to the study of gas evolving reactions at electrodes. The, 495
Bubble characteristics and aerosol formation in electrowinning cells, 581
Characterization of electrolytic bubble evolution by spectral analysis. Application to a corroding electrode, 503
Effect of operational parameters on gas evolution in electrolytic bulk: possibilities for lowering interelectrode resistance, 509
Effect of the gas void distribution on the ohmic resistance during water electrolysis. The, 537
Gas evolution on porous electrodes, 575
Growth kinetics of bubbles electrogenerated at microelectrodes, 475
Interfacial electrical properties of electrogenerated bubbles, 485
Mass and momentum transfer enhancement due to electrogenerated gas bubbles, 557
Mass diffusion-controlled bubble behaviour in boiling and electrolysis and effect of bubbles on ohmic resistance, 527
Mass transfer at gas evolving electrodes, 549
Modelling of gas evolving electrolysis cells. I. The gas voidage problem, 517
Potential distribution along gas evolving electrodes. 567

Electropainting

Potentiodynamic electrodeposition of paint (EDP), 825

Electrosynthesis

Anodic formaldehyde oxidation on Pt, Pd, Au and Pd–Au alloy electrodes in NaOH and Na_2CO_3 solutions, 907
Anodic substitution in emulsions under phase transfer catalysis conditions. II. Acetoxylation of demethoxybenzenes, 121
Electrochemical oxidation of aliphatic hydrocarbons promoted by inorganic radicals. I. OH radicals, 167
Electrochemical synthesis of pyrido[1,2-a]pyrimidine derivatives. II. Electrochemical reduction of 2,6-dimethyl-3-ethyl-4-oxo-4H-pyrido[1,2-a]pyrimidine in aqueous media, 145
Electroreduction of nitric oxide to ammonia at chemically modified electrodes, 279
Electrosynthesis in systems of two immiscible liquids and a phase transfer catalyst. VI. The influence of zinc chloride on the chlorination of naphthalene, 719
Electrosynthesis of organic compounds. IV. Synthesis of some arylnitromethane compounds, 469
Positive polyacetylene electrodes in aqueous electrolytes, 159
Use of ion exchange membranes in preparative organic electrochemistry. II. Anodic dimethoxylation of furan, 85

Energy conversion, power sources

Activation of hydrochloric acid–$CrCl_3 \cdot 6H_2O$ solutions with N-alkylamines, 63
Chemically regenerative redox fuel cell. II. A, 619
Copper (II) formate cathodes for seawater batteries, 201
Design characteristics of an aluminium–air battery with consumable wedge anodes, 191
Determination of state-of-discharge of zinc–silver oxide button cells. I. Galvanostatic measurements, 293
Determination of state-of-discharge of zinc–silver oxide button cells. II. Impedance measurements, 365
Determination of state-of-discharge of zinc–silver oxide button cells. III. *In situ* impedance measurements of each electrode, 591
Dissolution of iron from the negative material in pocket plate nickel–cadmium batteries. The, 711
Effect of an organic additive on the impedance of cadmium in alkaline solution, 737
Effect of the expander upon the two types of negative active mass structure in lead–acid batteries. The, 39
Effects of quinoneimine dyes on lithium cycling efficiency for $LiClO_4$-propylene carbonate, 901
Faradaic impedance measurements of small magnitudes encountered in high capacity electrical storage cells, 251
Grilles négatives composites pour accumulateurs au plomb, 421
High efficiency cathodes for alkaline air electrodes, 774
Ideally rechargeable cadmium electrodes for alkaline storage batteries, 453
Impedance of 23 Ah Ni–Cd cells with sintered electrodes: measurements in the range 10 kHz–0.001 Hz as an indication of residual capacity, 129
Impedance of the sintered nickel positive electrode, 399
Lithium cycling efficiency and conductivity for γ-lactone-based electrolytes, 317
Materials aspects of photoelectrochemical energy conversion, 1
On the use of pyrrole black in zinc–halogen batteries, 697
Polarization of Pt electrodes of a fuel cell with a high temperature-type proton conductive solid electrolyte, 93
Potentiostatic step experiments on pasted Pb–Sb and Pb–Sn–Ca electrodes, 99
Studies on chemically precipitated Mn(IV) oxides. IV. Effect of dopants/impurities on the discharge behaviour of chemical maganese dioxide in alkaline medium and the applicability of Atlung–Jacobsen model to the $(MnO_2)_{1-r}(MnOOH)_r$ system, 351
Studies on the lithium and potassium uptake of nickel hydroxide electrodes, 603

Membranes

Permeation of vanadium cations through anionic and cationic membranes, 231

Metal deposition, surface finishing

Electrodeposition of catalytically active nickel–thallium alloy powders from sulphate baths, 217
Electrodeposition of cobalt–nickel alloys from Watts-type baths, 107
Electron-beam-induced crystallization of anodic barrier films on aluminium: influence of incorporated anions, 781
Factors affecting the structure of copper deposits electrowon from aqueous chloride electrolyte, 649
Improvement of current efficiency in the cathodic formation of metal powders, 471
Influence of tartaric acid on the electrodeposition of silver from aqueous $AgNO_3$ solutions, 71
Influence of variables in nickel–manganese–zinc alloy plating from a sulphate bath, 23
Morphology of cadmium deposits obtained on foreign substrates at high overpotentials. The, 151
Recovery and recrystallization of electrodeposited bright copper coatings at room temperature. I. Microhardness in relation to coating structure, 879
Recovery and recrystallization of electrodeposited bright copper coatings at room temperature. II. X-ray investigation of primary recrystallization, 887
Scanning electron microscopic study of some nickel electroplates, 154
Tensile properties of acid copper electrodeposits, 631

Mineral electrochemistry, hydrometallurgy

Advances and further prospects in copper electrowinning, 789
Effect of copper on zinc electrowinning from industrial acid sulphate electrolyte. The, 953
Effect of maganese (II) added to the electrolyte on the properties of lead anodes used in oxidation of ferrous sulphate to ferric sulphate, 705

Importance of cathode zinc morphology as an indicator of industrial electrowinning performance. The, 865
Inhibition of PbO_2 formation during lead electrowinning, 937

Molten salt systems

Electrochemical alloying of nickel with niobium in molten fluorides, 947
Electrochemical deposition of aluminium on tungsten in cryolite based melts, 393
Electrochemical reduction of niobium ions in molten LiF–NaF, 259
Electrode heat balances of electrochemical cells: application to NaCl electrolysis, 209
e.m.f. and impedance of Na–S cells and sodium polysulphides during freeze-thaw cycles, 387
Etude du mécanisme réactionnel de réduction électrolytique de l'aluminium dans le mélange NaCl–KCl–LiCl–LiF fondu á 450° C, 267
Measurements of a.c. impedance of sodium–sulphur cells with symmetric and asymmetric resistance behaviour, 895
Single electrode heat of molten NaCl electrolysis: measurement by electrolytic calorimeter and heat flux transducer (HFT), 671
Sodium activity determinations in molten 99.5% aluminium using solid electrolytes, 379

Solid state, oxide films

Behaviour of Li_4SiO_4 and its solid solutions during d.c. and a.c. measurements, 459
Oxide ion and electron mixed conduction in the fluorite-type cubic solid solution in the system Bi_2O_3–$Tb_2O_{3.5}$, 447
